DETAILED ACTION**PRIOR ART REJECTIONS****Statutory Basis*****Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other copending application. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

The Rejections

Claims 1-35 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 through 38 of Shin et al. (U.S. 6,717,248 B2) in view of Akram et al. (U.S. 6,235,554 B1). Shin teaches the basic features of applicant's claims but does not specifically claim the use of first ball lands, bond fingers, plurality of input/output pads and fusing conductive balls on the first ball lands. However, Akram discloses a stackable chip scale semiconductor package (see Figure 1). Therefore, it would have been obvious to one having ordinary skill in the art

Art Unit: 2818

at the time the invention was made to modify the teaching of Shin (accordance with the teaching of Akram). Doing so would facilitate the manufacture of the semiconductor device and increase the speed of the semiconductor structure. For these reasons, claims 1-35 are seen as obvious variations of the patented claims.
